KAWASAKI STEEL TECHNICAL REPORT

No.22 (May 1990) Advanced Technologies of Iron and Steel, Commemorating the 20th Anniversary of the Technical Research Division

Recent Applications of Optical Measurement Techniques to Steel Industry Processes

Akira Torao, Takayuki Yanagimoto, Hiroyuki Uchida, Fumihiko Ichikawa, Kenji Kataoka

Synopsis :

On-line measurement of quality and dimensions of products and the condition of processes has recently become very important to keep stable production of high quality and homogeneous products. This tendency is also applicable to the steel industry. To satisfy these strong needs, optical measurement technologies and instruments have been developed because of their advantages such as noncontact, high-response and high-sensitive measurements. Recent advances of hard-ware technologies have also contributed to development of new instruments. Recent examples are dimensional hr[m5y Tm0 Tc().346.3643 Tmfda0 2TD.000(c)JFE-2.2(l Corporcent, **2**,)**8** e)3.3(a0.3643 Tmfd03 Tmfd03 Tmfd03 T
