Synopsis:

In these ten years just before the 2lst century, Kawasaki steel has developed many new products and methods for both architectural and civil construction uses. For building construction, fixed outer dimension H-shapes and TMCP heavy H-shapes have been developed to optimize the design of steel structures. High rigid steel wall known as "K-Domeru", new type wide sheet piling with 600 mm width and new steel structure known as "REED" construction method have been developed to contribute to the reduction of the public investment. In this report, the details of new products, methods and prospects for the future in those fields are described.
